

DIMITAR BETINSKI

Skopje, North Macedonia | +389 72 739 305 | dimitarbetinski@gmail.com | linkedin.com/in/dimitarbetinski | github.com/Dimitry4Now

Full-stack software developer with hands-on experience building and maintaining national healthcare systems using Java, Kotlin, Spring Boot, Apache Tapestry, and Angular/Ionic, including backends serving mobile applications with hundreds of thousands of active users. Comfortable owning a feature end to end, from backend API design through production support and troubleshooting. Brings a background in industrial automation and PLC programming, adding a practical, systems-level way of thinking to software problems. Outside work, interested in low-level programming and embedded hardware, building Arduino-based projects such as a hobby CNC machine and a smart home system. A dependable teammate who picks up new tools quickly and cares about writing code that holds up in production.

EXPERIENCE

Full-Stack Software Developer

Sorsix, Skopje

04/2023 – Present

- Develop and maintain features for the **national healthcare and education systems**, using **Java 8** and **Apache Tapestry 5.3.8** to build and enhance functionality relied on by public-sector end users.
- Support and troubleshoot existing production features across both the healthcare and education systems, handling **support tickets** and resolving issues via a local **Redmine** instance.
- Contribute to and expand a **backend API written in Kotlin**, integrating it with a **multiplatform mobile application** built with **Ionic** and **Angular**.
- Built **Kotlin backends from scratch** for two national healthcare mobile applications: **IzabraniDoktor** (Serbia's national health system app, **200k+ active users**) and **MoeZdravje** (North Macedonia's national healthcare app, **~35k users**).
- Manage version control through a local **GitLab** instance, collaborating with the team on code changes and releases.
- Provision and configure **Linux** environments (alpha and production) from scratch on VMs handed off by the infrastructure team, setting them up end-to-end to deploy **Java** and **Kotlin** applications, including **Nginx** configuration as a reverse proxy and web server.
- Set up **PM2**-managed Node.js runtimes to deploy **Next.js** marketing websites, including sorsix.com and whxray.com, as well as CRM-driven marketing sites for healthcare providers integrated with **Microsoft Entra ID** for authentication.
- Configured Node.js environments and **GitLab CI runners** to run automated tests for the marketing website projects.
- Handle analytics, tracking, and optimization for the marketing websites: set up **LinkedIn Ads** conversion tracking, manage tags and events through **Google Tag Manager**, monitor traffic and user behavior in **Google Analytics** and **Firebase**, and improve **SEO** and page performance using **Lighthouse** and **PageSpeed Insights**.
- Integrate **laboratory analyzers** with the healthcare information system; for an oncology laboratory, mapped results from **Sysmex XN-series**, **Maglumi X8**, and **Abbott Architect** instruments, and built retrieval of result images from Sysmex analyzers **from scratch**.

Robot/PLC Technician

DURA Automotive LLC

04/2022 – 03/2023

- Maintained and troubleshoot **ABB robots** and **Siemens PLCs** as part of the plant maintenance team, keeping production lines running with minimal downtime.
- Worked hands-on with top-tier production machinery including **CNCs**, welding stations, and systems for gluing, sealing, and deburring.
- Planned, designed, and implemented a new feature on an existing **robotic final-packing cell**: extended it from placing parts into boxes to full **lid handling** (opening, buffering, closing), designing the mechanical fixtures, **pneumatics**, and **electrics**, then installing and programming the solution.
- Diagnosed machine behavior and fault conditions across diverse equipment, building practical knowledge of **industrial automation** and preventive maintenance.

PLC Programmer

AIM Professionals

10/2021 – 03/2022

- Programmed and configured **ABB robots** and **Siemens PLCs** for industrial automation tasks.

Robotics and Mechatronics Intern

Sorsix & AIM Professionals

08/2021 – 10/2021

- Completed a course at the Faculty of Electrical Engineering focused on **Mitsubishi PLCs** and **Ladder Logic**.
- Gained hands-on experience programming in **Mitsubishi GX Works** and running simulations in **FactoryIO**, building a foundation in PLC-based control systems.

TECHNICAL SKILLS

Languages: Java, Kotlin, JavaScript, C, C++ , Python, SQL, Bash

Backend: Spring Boot, Apache Tapestry, REST APIs

Frontend: Angular, Ionic, HTML5, CSS3, jQuery

Databases: PostgreSQL

Testing: JUnit, Selenium WebDriver

Industrial Automation: Mitsubishi PLC (Ladder Logic, GX Works), FactoryIO, ABB robots, Siemens PLCs, pneumatics

DevOps & Tools: Linux, Docker, Nginx, PM2, GitLab CI, Git, Redmine

Languages Spoken: Macedonian (native), English (fluent)

EDUCATION

Faculty of Information Sciences and Computer Engineering, Skopje

2017 – Present

Informatics and Computer Science Engineering

Semos Education, Skopje

Aug – Oct 2021

Advanced Microsoft Office Excel Course

PROJECTS

Hant Tracker | *Angular, TypeScript, Spring Boot, Java 21, JPA, PostgreSQL* [link]

- Full-stack app that records a weekly card game played on paper: round-by-round score entry, personal dashboards, all-time leaderboard, game replay analysis, and money settlement between players, with JWT auth, admin-approved accounts, and dedicated mobile layouts.

ssshub | *Go, Bubble Tea, Wish, SQLite* [link]

- Multi-user terminal hangout served over SSH: live chat lobby with presence, trivia, snake, a meme gallery, and per-game leaderboards, with persisted profiles and selectable themes.

Digifiz Dash | *Python, pygame, MQTT, Raspberry Pi* [link]

- Pixel-faithful recreation of the VW Digifiz digital instrument cluster, driven by live sensor data on a Raspberry Pi; rebuilt from a fork around a data-source abstraction, resolution-independent rendering, and a test suite.

CV as Code | *LaTeX, Pandoc, Lua, GitHub Actions* [link]

- Single-source CV kept in one LaTeX file: on every push, a GitHub Actions pipeline compiles the PDF, converts the CV to Markdown through Pandoc and a custom Lua filter, assembles it into the GitHub profile README, and commits both back to the repository.

Smart-Home | *Arduino (C/C++), MIT App Inventor, Bluetooth* [link]

- Two-person university project: Arduino Uno home model controlled by an Android app over an HC-05 Bluetooth link, with per-room lights and PWM dimming, RGB lighting, an I2C LCD status display, and light (LDR) and ultrasonic distance sensor automations.

scripts | *Bash* [link]

- Portable Bash toolbox for Linux and macOS: git clone auditing and branch cleanup, live clone throughput monitoring, video and WebP media compression, port freeing, and remote terminfo fixes; safe by default with dry runs and argument validation.

LICENSES AND CERTIFICATIONS

Advanced Microsoft Office Excel – Verify

Mitsubishi PLC (Ladder Logic, GX Works)

Driving licence, categories B and C
